

Milestone 1 Report

Group 8

March 19th, 2021

What we accomplished:

we have created the prototype structure of the app, we used tab bar to split our app's functionality: A home page and a goal management page. In the Home page, the users will easily check their current progress for the day. In the Goal management page, the user can add goals and see existing goals. Moreover, we have accomplished row functionality to add goals and display them, and show them in home page

What we have changed:

The checker will also be moved to milestone 2 after the team has decided the most appropriate mechanism to check daily progress. we will discuss more possibilities and visit Professor and TAs' office hours to ask for help.

The corresponding change has been made on our proposal for the project schedule.
