

Milestone 2 Report

Group 8

April 2nd, 2021

What we accomplished:

We have modified and optimized the data model that stores users' information, in this case, the display of data is more convenient. Moreover, we have accomplished all tasks that are planned in proposal: we have a single view for users to keep track of what goals are left for today. Moreover, we have added the check button to remove accomplished goals from today's goal board. Lastly, I have applied the navigation view and tab view that we learnt recently to improve the UI and application layout. The Project is on the right track, and we are going to develop and improve it with future discussion in groups.
